ABSTRACT

The present invention provides an information service method for providing information about a circuit-board inspection service, circuit-board manufacturing service or the like to clients and dealers to support and facilitate transactions therebetween. The information service method comprises the steps of receiving a board-specification information defining a specification of a circuit board from the client, providing the received board-specification information to the dealers, receiving information about products providable from the dealers, and providing the received product information to the client. Thus, the information from each dealer can be provided to the client.
